

## Example of the Lorenz Curve

Consider the following table:

**Adjusted Lorenz Cure for Premature Mortality Using  
Urban Income Quintile (Fiscal Years: 2004-2007)**

|              |         | (points for x-axis) |                 |                   |                                     |          |                | (points for y-axis)            |  |
|--------------|---------|---------------------|-----------------|-------------------|-------------------------------------|----------|----------------|--------------------------------|--|
| cal_yrs      | chquint | crude_nu<br>m       | crude_de<br>nom | percent_<br>denom | crude_cu<br>m_perce<br>nt_deno<br>m | adj_rate | adjust_n<br>um | adjust_cu<br>m_perce<br>nt_num |  |
| 5: 2004-2007 | U1      | 2566                | 514408          | 0.19486           | 0.19486                             | 5.30749  | 2730.21        | 0.33415                        |  |
| 5: 2004-2007 | U2      | 1726                | 523465          | 0.19829           | 0.39315                             | 3.35153  | 1754.41        | 0.54887                        |  |
| 5: 2004-2007 | U3      | 1571                | 524817          | 0.1988            | 0.59196                             | 2.79607  | 1467.42        | 0.72847                        |  |
| 5: 2004-2007 | U4      | 1273                | 537436          | 0.20358           | 0.79554                             | 2.27631  | 1223.37        | 0.87819                        |  |
| 5: 2004-2007 | U5      | 1014                | 539752          | 0.20446           | 1                                   | 1.84388  | 995.24         | 1                              |  |
|              |         | 2639878             |                 |                   |                                     |          | 8170.65        |                                |  |

Here we see that U1 (lowest urban neighbourhood income quintile representing 19.5% of the population) accounts for 33.4% of all premature deaths.
