Health Indicators: Child Mortality Rates

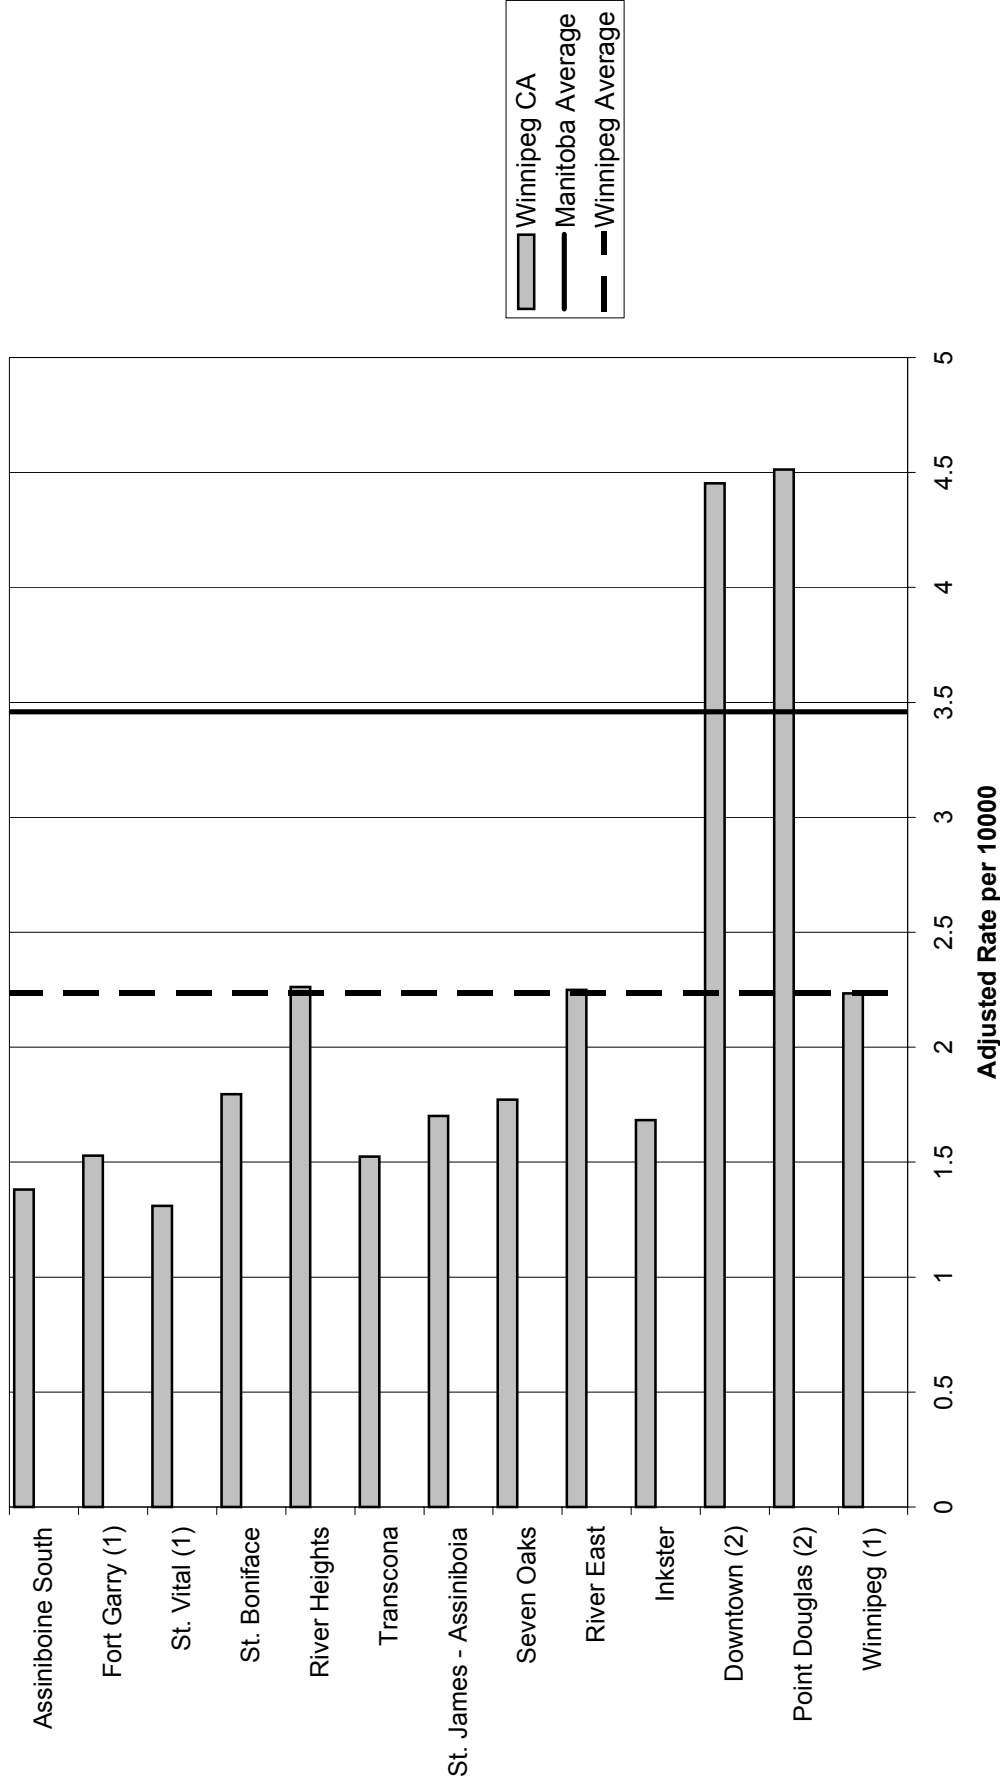

Child mortality rates in this report include Manitoba children from 1 to 19 years of age. Due to low numbers of deaths, child mortality rates are shown only at the RHA and Winnipeg CA level. For the RHAs, the child mortality rates for North Eastman, Nor-Man and Burntwood are significantly higher than the provincial average, whereas rates for Winnipeg are significantly lower. For the Winnipeg CAs, both Downtown and Point Douglas have child mortality rates that are significantly higher than the Winnipeg average, though not different from the provincial average.

**Child Mortality Rates for Children Aged 1-19 Years
by Manitoba RHA, 1997-2001**

'1' indicates rate significantly different from the Manitoba mean
's' indicates data suppressed due to small numbers

Child Mortality Rates for Children Aged 1-19 Years by Winnipeg CA, 1997-2001

'1' indicates rate significantly different from the Manitoba mean

'2' indicates rate significantly different from the Winnipeg mean

These definitions can be found in the Child Health Atlas Glossary:
